

Appendix I: Bicycle Count Summary

The tables on the following pages contain bicycle count information compiled for this master plan update. Counts were taken at four locations at three different times each, two on weekdays and one on week-ends. Times have been adjusted for local conditions.

The bicycle use survey employed a standardized form based on National Bicycle and Pedestrian Documentation Project methodology. The surveyor was asked to note location, weather conditions, date and time. Surveyors were instructed to note specific user attributes. For example, they were asked to count the number of people on bicycles, not the number of bicycles. Therefore, two people on a tandem bicycle were counted as two, not one. Cyclist gender was also noted, as well as cyclists who were seen riding on the sidewalk.

Bicycle Count Summary

Location: Bonita Road and Otay Lakes Road

Date: 9/29/10

Time Period: 7-8am/4-6pm

Weather: Sunny and warm

		Weekday Count
